

Drum Clamp

Drum Clamps - Forklifts are meant to deal with lifting, storing and moving pallets. For businesses that handle items in drums, you have to use an attachment to lift, store and move them. There are numerous drum forklift attachments that you can get for all your drum moving, lifting and storing needs. These attachments are specially meant to be able to deal with drum containers - thus there is no chance of damage to the product or drum container when they are lifted, stored or moved.

Drum Positioner And Grab

The drum positioner could be utilized to load and unload drums off of drum stands, vehicles and racks. These are obtainable in three and four tine models. This accessory is completely mechanical, hence enabling the individual operating it to be able to operate all from the comfort of the lift truck seat. Able to move steel, large and extra large plastic drums, its capacity is 210 liters. This particular attachment is intended for drum pyramid stacking.

The drum grab is fork designed and mounted with the sole purpose of handling steel drums that have rolling hoops. Though the purpose for the design was to deal with steel drums with rolling hoops, the drum grab could accommodate the transporting of extra large and large plastic drums. Drum capacity maximum is 210 liters for steel drums with rolling hoops and 220 liters for plastic drums.

The Rotator

The drum rotator is one more forklift accessory which mounts onto the blades themselves. Their objective is to be able to lift the drum and turn it upside down. The drum is clasped into the drum rotator utilizing a clamp which fits around the middle of the drum. The rotation is executed by either a crank handle or a continuous loop chain. The crank handle is utilized for operations that happen beneath shoulder level. For operations which must take place over shoulder level, the continuous circle chain will be utilized.

The drum tines are carriage mounted or simple fork accessories. They are used for stacking and unstacking 210-liter metal drums. Stacking requires nothing elaborate, merely simple horizontal placement of the drums. The carriage-mounted attachments lessen the load center of the drums.

Automatic Tongs

Drum tongs are available in semi-automatic and automatic models. They are used in the tight head or open topped steel drum styles. The drum forceps could be attached in a few ways to the lift truck. One way is to attach them underneath a fork-mounted hook. Another way is to connect them to a fork-mounted jib or a carriage mounted jib. Either the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no need for the person operating it to ever leave the seat of the forklift.

Rim Grip Handler

The Rip Grip Drum Handler is the ideal option for lift truck accessories, when there is a necessity to store drums with limited area accessible. This particular attachment could be used on both 120L and 210L drums. The Rim Grip Handler functions by utilizing steel jaws so as to hold the edge of the drum. It lifts the drum and sets it down without needing any space between all the drums. The typical unit used in the trade is a zinc-plated handler, even though, this accessory comes accessible in stainless steel for the food and drink industry.
